

# Get it right every time with Timeguard's gold-standard product data

Looking for good, 100% reliable product data to spec a job? You can rely on Timeguard.

Whether you are looking at our own website at [www.timeguard.com](http://www.timeguard.com) or checking our products out with a wholesaler, you can be sure the information you are looking at is accurate and bang up to date. That's because we are part of the Electrical Distributors Association EDATA scheme and are one of the few manufacturers to achieve EDATA Gold Status.

Winning gold means that you'll have the comfort of knowing every Timeguard product listed with EDA EDATA has been submitted to the international benchmark standard ETIM data format. Wholesalers who subscribe to the EDATA scheme, which is open to small and independent outlets as well as nationals, major players and EDA members, will always be sharing the very latest product data with you. The EDATA scheme even updates their online information automatically, a further guarantee that they are sharing only the best, latest information with you.

## EPIM too!

Many specifiers and contractors prefer to use ePIM, a trusted, affordable PIM system developed for the electrical and construction industry. Here again Timeguard is on top if its game with standard datasheets available via the Timeguard website.
